

Sentinel Command — Analytics Output Report

Gujarat Police Innovation Challenge 2026 · Government-feed and own-feed demonstration · Generated from the working events store (not a mock spreadsheet).

1. Onboarding evidence

Registry contains **33** cameras: **30** official Sentinel ids (cam01–cam30 via cameras.json) and **3** own-feed recordings. This is the full sandbox catalogue (the brief says “approximately 50”; the live grid currently publishes 30).

2. Government-provided feed (Camera 4 Paldi / cam04)

Ingest: RTSP TCP `rtsp://103.250.160.189:8554/stream/cam04`. Method recorded as `rtsp-tcp`. Sample window on 01 Sep 2026 ~19:17 UTC (00:47 IST 02 Sep).

YOLOv8n output: **61** vehicle events — truck 31, car 22, motorcycle 7, bus 1. RapidOCR readable plates on this wide junction sample: **0**. That is expected at Paldi circle distance; we still emit timestamped vehicle metadata and annotated stills.

Time (IST)	t_sec	Class	Conf	Snapshot
02 Sep 2026 00:47:05 IST	0.0	car	0.481	frame_0001.jpg
02 Sep 2026 00:47:05 IST	0.0	motorcycle	0.465	frame_0001.jpg
02 Sep 2026 00:47:05 IST	0.0	truck	0.438	frame_0001.jpg
02 Sep 2026 00:47:05 IST	0.72	truck	0.615	frame_0002.jpg
02 Sep 2026 00:47:05 IST	0.72	car	0.5	frame_0002.jpg
02 Sep 2026 00:47:06 IST	1.436	truck	0.577	frame_0003.jpg
02 Sep 2026 00:47:07 IST	2.16	truck	0.58	frame_0004.jpg
02 Sep 2026 00:47:07 IST	2.16	car	0.511	frame_0004.jpg
02 Sep 2026 00:47:07 IST	2.876	car	0.668	frame_0005.jpg
02 Sep 2026 00:47:07 IST	2.876	truck	0.49	frame_0005.jpg
02 Sep 2026 00:47:08 IST	3.596	car	0.476	frame_0006.jpg
02 Sep 2026 00:47:08 IST	3.596	truck	0.431	frame_0006.jpg

Table 1. Sample of Paldi (cam04) live detections. Full set is 61 rows in events.json.

3. Government feed Camera 5 Visat (cam05)

Earlier RTSP sample stored **10** vehicle events (plates unread). Same pipeline as Paldi.

4. Own-feed ANPR + watchlist hunt (GJ01AB1234)

Close-up Gate and Paldi-style MP4s, treated as two cameras. Representative watchlist plate **GJ01AB1234** (stolen). Hunt returns the trail below. CSV sibling file: `hunt-GJ01AB1234.csv`.

Camera	Location	Clip time	Class	Conf	When stored (UTC)
Cam-AHM-Paldi ANPR	Paldi Circle style junction	5s	car	0.851	2026-08-20T20:17:53
Cam-AHM-Paldi ANPR	Paldi Circle style junction	6s	car	0.865	2026-08-20T20:17:56
Cam-AHM-Paldi ANPR	Paldi Circle style junction	7s	car	0.9	2026-08-20T20:17:57
Cam-AHM-Gate ANPR	City gate / boom (close plate)	0s	car	0.868	2026-08-26T10:26:17
Cam-AHM-Gate ANPR	City gate / boom (close plate)	1s	car	0.831	2026-08-26T10:26:19
Cam-AHM-Gate ANPR	City gate / boom (close plate)	2s	car	0.782	2026-08-26T10:26:21

Cam-AHM-Gate ANPR	City gate / boom (close plate)	7s	car	0.64	2026-08-26T10:26:29
Cam-AHM-Gate ANPR	City gate / boom (close plate)	7s	bus	0.4	2026-08-26T10:26:30

Table 2. Hunt GJ01AB1234 — 13 hits across 2 cameras (Gate boom + Paldi junction).

5. How to reproduce on jury day

1. Start API :8000 and UI :5174. 2. Confirm grid signed in. 3. Fetch Sentinel grid. 4. Select Camera 4 — HLS plays. Capture → Detect. 5. Own-feed Gate/Paldi Detect. 6. Hunt the designated registration. 7. Export CSV. If Hunt is empty, capture 4/5/12 first.

This report is generated from data/events.json in the prototype. Mock-ups were not used.
